INTRODUCTION

The Auburn 6 is the latest offering in the Masport wood fire range. It takes the clean, sharp lined design language developed for the Auburn Inbuilt range of heaters and evolves it further for the freestanding format.

The Australian designed and made wood fire will keep a medium to large home warm with its combination of radiant and convection heating, efficiently transferring its 8kW max average heat output and 14kW peak into the home.

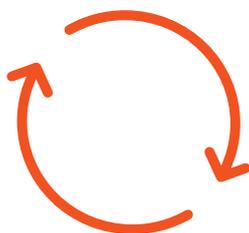

The Auburn 6 fires provide a high quality user experience thanks to their aesthetic appeal and functionality. The fire view is framed beautifully with a full glass door and jet black border fading gradually into the fire. Finished in metallic black with complimenting satin black touch points. The single air control system allows for a steady stream of oxygen into the fire while also keeping the glass clean. The Auburn 6 range is compatible with an insulated flue and can be fitted with an optional outside air kit - sold separately.

The Auburn range is supported with a 10 year firebox warranty making it the perfect solution for freestanding fires in the Australian home.

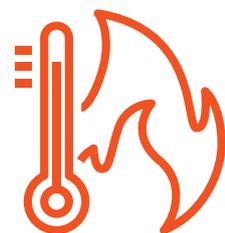

AUBURN 6 - KEY SELLING FEATURES

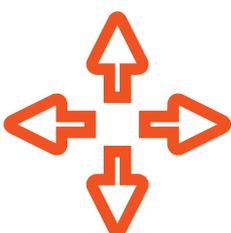

0.9g/kg Emissions

61% Efficiency on average
